

What is EcosAgile Workspace?

EcosAgile Workspace is the easy and innovative solution for responding to the **organisational and management dynamics of office staff**. It is the software that allows the booking and management of workstations within company offices, supporting the sharing of spaces and helping the facility manager to respect and optimise working environments in favour of smart workplaces.

EcosAgile Workspace allows **workstations, desks, meeting rooms and coworking spaces** to be booked at any time via the web and display booking system: it provides a real-time view of bookable and occupied spaces and enables precise planning and scheduling of workstations thanks to a constantly updated and clear calendar of room availability, which can be integrated into shared **Google and Outlook** calendars.

With EcosAgile Workspace it is possible to set up **usage policies** by defining groups of users enabled to make bookings according to qualification or function, setting duration and maximum number of bookings to be made over time or setting a maximum number of people in specific rooms.

EcosAgile Workspace also allows you to see the **characteristics, audio and video equipment** and accessories of each workstation, coworking environment and meeting room: it allows you to divide workspaces into **fixed**, permanently assigned to one or more people, **bookable and occupied**.

Who is it designed for

EcosAgile Workspace is ideal for all companies that work in **coworking** and for companies that manage Personnel within an **agile and distributed working context**, alternating between face-to-face work and smart working.

Meeting room display device available
